# Chest checklist

## Do you know what's normal for your chest?

**Breast cancer can affect people of any age or gender. It can take a while to feel confident about your own normal.**

**Here are some tips to get started:**

**1**

### **Check every month**

This will help you get to know what's normal for you. You can use any method you're comfortable with, such as lying down in bed, standing in front of a mirror or when you're showering.

**2**

### **Look AND feel**

Remember to check all parts of your chest, including your armpits, up to your collarbones and your nipples.

**3**

### **If in doubt, get checked out**

Early detection is the best form of defence. If you notice anything unusual for you, talk to your GP.

# Ball skills

**Do you know what's normal for your balls?**

**Testicular cancer can affect men of any age, but it's most common between the ages of 15-45, so you're never too young to get to know your nuts.**

**1**

## **Check regularly**

We'd advise having a feel about once a month. You might want to check when you're having a bath or shower (as your testicles will be warm and relaxed).

**2**

## **Have a Feel**

Rest your balls in the palm of your hand and gently use your thumb and fingers to feel them, being aware of the small tube which lies behind each testicle. Don't worry if one's bigger or hangs lower - it's normal!

**3**

## **If in doubt, get it checked out.**

Most changes to your balls won't be cancer, but see your GP if you notice a lump, bump or anything unusual for you.
